

# HOTGLUE TO SVG

Xavier Klein in collaboration with LAFKON.

licensed under GNU GPL version 3 (or later) see <http://www.gnu.org/licenses/>

Simple BASH script who's turning an Hotglue page to a fully editable SVG in Inkscape. You can also turn it into PDF.

Install Hotglue (<http://hotglue.org/>) on your server.

Make something on your hotglue page. When it's done, run the script in a terminal ("cd script directory" and "bash svgpagevo3.sh").

Your terminal will ask you to enter the URL of your Hotglue page content ([www.yousite.com/hotglue/content/yourpage/head](http://www.yousite.com/hotglue/content/yourpage/head)).

Push enter and wait for the result, it gives you all the files + a svg and a pdf files.

Installez Hotglue (<http://hotglue.org/>) sur votre serveur.

Construisez une page avec Hotglue.

Quand c'est fait, lancez le script dans un terminal ("cd script directory" et "bash svgpagevo3.sh").

Le terminal devra vous demandez l'URL où se trouve les fichiers ([www.yousite.com/hotglue/content/yourpage/head](http://www.yousite.com/hotglue/content/yourpage/head)).

Appuyez sur Entrer et attendez le resultat, le programme va vous donnez tous les fichiers + un fichier svg et un pdf.

Known issues :

If you using some text, never use the standarts parameters, try to set a new font style, new font size etc.

Don't use the flip, mirror mode. Don't use the space-word mode.

The svg will seems crappy, you have to use Inkscape to see it correctly. I use Flowroot for the text in the svg and it's readable only with Inkscape.
